

## Exercise sheet 7: Suffix-Trees

---

### Exercise 1

You are given the text  $T = CAGTAGTAGC$

**Question 1A** Draw the corresponding suffix tree

**Solution**

**Question 1B** Describe the steps of a counting query for  $P = TAG$

**Solution**

- start at root node
- locate outgoing edge that starts with  $T$
- match subsequent characters of the pattern
- in the subtree rooted at  $\overline{TAG}$  count the number of leaves  $\Rightarrow 2$

**Question 1C** Describe the steps of a reporting query for  $P = AG$

**Solution**

- start at root node
- locate outgoing edge that start with  $A$
- match subsequent characters of the pattern
- in the subtree rooted at  $\overline{AG}$  report the labels of all leaves  $\Rightarrow \{2, 5, 8\}$

## Exercise 2

**Question 2A** Draw a generalized suffix tree for the sequences  $A = CCATG$  and  $B = CATG$ .

**Hint 1** Concatenate the two sequences using a unique character for splitting. e.g.  $CCATG\#CATG\$$ .

Dont forget to include suffix links

**Formulae**  $sl(v) = w$

$v = \overline{cb}$

$w = \overline{b}$

$c : \text{character}, b : \text{string}$

remember: over lined strings are a representation for the node at that string

**Solution**

CCATG#CATG\$

**Question 2B** Find the Maximal Unique Matches of the sequences  $A = CCATG$  and  $B = CATG$  using the tree from A)

**Solution**  $CATG$  is the only MUM as  $v = \overline{CATG}$  has no suffix links pointing to it

### Exercise 3

**Question 3A** Draw a generalized suffix tree for the sequence  $A = ACGCACGCG$ .

**Solution**

**Solution**  $ACGC : (1, 5, 4)$
